**BL01**

MACHINE FOR CONTACTLESS  
HAND DISINFECTION

**CONVENIENT, FAST AND WHAT  
IS THE MOST IMPORTANT, SAFE HAND DISINFECTION**

It will perfectly work  
wherever we deal with  
a large flow of people.

Logo or graphics  
marking option

**The unique design makes the device is intuitive  
to use and the whole process takes only few seconds.**

## How does it work?

A customer approaches the machine and puts his/her hands at a place indicated by an arrow. Embedded ultrasound detector detects their presence and the distributor releases an optimum dose of disinfecting agent. The system is exceptionally effective - an embedded large container of disinfectant is sufficient even for 160 000 doses, that is why it does not need frequent refilling.

Therefore the customer can take care of his/her safety in a fast and contactless manner even at locations frequented daily by a large number of people. It will work perfectly well in schools, hospitals, stores, restaurants, hotels, cinemas, offices or shopping malls.
